

The Future of Environmental Intelligence

Every building is becoming a sensor. **No one built the software that turns those measurements into trusted decisions.**

AtmosFlow is building the interpretation layer for environmental intelligence.

— A SHIFT IS HAPPENING

The bottleneck moved from collecting data to interpreting it.

2015

Environmental measurements were expensive.

Most buildings weren't monitored. A reading was a scheduled event, taken by a specialist.

2026

Continuous sensing is becoming standard.

Buildings now stream millions of environmental measurements. The data is no longer the hard part.

13%

Annual growth in the commercial sensor installed base (+10-13% / yr)

7k

Credentialed interpreters worldwide — the constraint that isn't growing

Sources: IndexBox, 2026; BGC / ABIH program data as reported by industry sources. **Sensor installed base: +10-13% a year. Credentialed interpreters worldwide: ~7,000.**

— THE PROBLEM

Today's workflow was never designed.

Seven tools, six handoffs. Nobody chose this — it accumulated.

6-10

hours per assessment

Inconsistent

practitioner to practitioner

Unscalable

linear in expert time

Hard to QA

reasoning left undocumented

— THE INSIGHT

**Every new sensor
creates another
report.**

Not another expert.

Measurements in. Trusted decisions out.

One path. **The same path, every time.**

Hover any stage to lift it. Four boxes — resist adding a fifth.

AI communicates. Deterministic logic decides.

GENERAL-PURPOSE AI

Probabilistic

- ✗ Can hallucinate a threshold
- ✗ Inconsistent across runs
- ✗ Reasoning not recoverable

ATMOSFLOW

Deterministic

- ✓ Every value cited to a source
- ✓ Reproducible, run after run
- ✓ Reasoning persists with the file

The answer to "isn't this a GPT wrapper": the model never touches a number.

— WHY PROFESSIONALS TRUST IT

Trust is the product.

Transparency

Hover

Auditability

Hover

Defensibility

Hover

**Professional
review**

Hover

Four words. Say each one and stop — the detail is there for the reader.

Capture. Interpret. Deliver.

01

Capture

A guided assessment collects building, HVAC, observation and logger data in one structured workspace.

02

Interpret

The deterministic engine scores findings against cited references and builds the causal pathway.

03

Deliver

A structured draft report — executive summary through recommendations — ready for professional review.

Built, tested, and asked for by name.

6

Product modules shipped

5

Standards frameworks integrated

2

Named beta testers

1

Public sample report

“

It will be the foundation for all of my future IAQ investigations.

Ahmed F., CSP, CHMM — Memorial Sloan Kettering

“

The quality of the final reports is radically impressive.

Yvette C. — Regional Safety Engineer, Amazon Web Services

— CATEGORY

A new layer, not a new competitor.

INTERPRETATION

AtmosFlow

Measurements become scored, cited findings a professional will sign.

The decision

SYSTEMS OF RECORD

Enterprise platforms storing incidents, audits and compliance records.

Cority · VelocityEHS

MONITORING

Installed monitors streaming live readings to dashboards.

Airthings

SENSORS

Professional instruments that capture the measurement itself.

GrayWolf · TSI

Everyone below the line produces data. **We are the layer that produces the decision.**

Positioning reflects each company's own published product category. Names are used for market orientation only.

Air is the beachhead, not the market.

Air quality

Indoor air quality · the engine's first domain

Live in beta

Water

HydroScan architecture already extends here

Next

Noise

Same engine, new reference library

Radiation

Same engine, new reference library

Occupational exposure

Occupational exposure assessment

Air quality

Reference library: ASHRAE · NIOSH · EPA · WHO

Indoor air quality is where AtmosFlow is live in beta today — the proving ground for the deterministic core.

The engine is domain-agnostic. **Only the reference library changes per hazard class.**

Environmental intelligence is the category. Air is where it starts.

— BUSINESS MODEL

Every customer is a step up the ladder.

Land with a single assessment. **Expand** into infrastructure.

Pricing not yet published publicly; beta users are promised founding-member pricing at launch.

— WHY US

Lived the workflow. Built the engine. Built the company.

Tsidi

Lived the workflow

Francis

Built the engine

Enoch

Built the company

Hover a card for the detail. The three verbs are the pitch; the rest is for diligence.

— VISION

**Every environmental
measurement
deserves trusted
interpretation.**

Air is our beachhead. **Environmental intelligence is the horizon.**

— THE ASK

Raising a pre-seed round on a SAFE.

What the next 18 months buy.

Paid launch

Convert the beta cohort to founding-member subscriptions.

100 customers

Practitioners and small firms, sold direct and through associations.

Enterprise pilots

First seat-based deployments with institutional buyers.

Water module

Second hazard class on the same deterministic core.

API

First platform partner embedding the engine.

— FOR DILIGENCE

Appendix

Everything below this divider is for diligence, not the room.

\$11M ARR on under 8% of U.S. firms.

Projected ARR — five-year model (\$M)

YEAR
1 **\$0.4M**

150 customers
0.3% of U.S. firms

YEAR
3 **\$3.2M**

1,200 customers
2.2% of U.S. firms

YEAR
5 **\$11.3M**

4,200 customers
7.8% of U.S. firms

Held to a constant ~\$2,700 blended annual contract value — growth comes from customer count, not price assumptions. Penetration calculated against 53,973 U.S. environmental consulting firms (IBISWorld, 2025). Projections are management estimates.

Where AI is allowed, and where it is not.

● DETERMINISTIC ENGINE OWNS

- ✓ Every screening reference and threshold
- ✓ Every score, sub-score and outcome
- ✓ Confidence handling when inputs are missing
- ✓ Traceability from each value to its citation

AI IS PERMITTED TO

- ⊖ Extract text and tables from uploaded documents
- ⊖ Draft narrative prose from engine outputs
- ⊖ Answer questions about a completed assessment

AI IS NEVER PERMITTED TO

- ✗ Set or adjust any screening reference
- ✗ Decide a score, severity or outcome
- ✗ Assert compliance, causation or health effect

Output linter: a banned-phrase check inspects every generated output and blocks compliance, causation and clinical language before it can leave the system.

Built on the references you already cite.

ASHRAE 62.1

Ventilation for acceptable indoor air quality.

VENTILATION

ASHRAE 55

Thermal environmental conditions for human occupancy.

THERMAL COMFORT

NIOSH RELs

Recommended exposure limits for airborne contaminants.

EXPOSURE LIMITS

US EPA

Indoor air quality guidance and building assessment protocol.

ASSESSMENT

WHO

Indoor air quality guidelines for selected pollutants.

GUIDELINES

Findings map to the frameworks the professional's reports already rely on. **AtmosFlow screens against these references; it does not determine regulatory compliance.**

Every output is flagged for review and carries no conclusion until a credentialed professional signs it.

Where the numbers come from.

Firm count & industry revenue

IBISWorld, Environmental Consulting in the US (NAICS 54162) — 53,973 businesses (2025); \$27.4B industry revenue (2026); 2.6 employees per business.

Sensor installed base

IndexBox, Indoor Air Quality Sensor market outlook, 2026 — commercial building installed base growing 10–13% annually.

CIH population

Board for Global EHS Credentialing (formerly ABIH) program data as reported by industry sources — roughly 7,000 active CIH holders worldwide, about 600 exam candidates annually.

Financial model

AtmosFlow five-year model. Management estimates; penetration derived from the IBISWorld firm count above.

IAQ monitoring market

Research & Markets, Indoor Air Quality Monitoring Solution Market — \$4.28B (2026) to \$8.45B (2032), 11.9% CAGR.

EHS software market

Mordor Intelligence, EHS Software Market — \$2.48B (2026) to \$3.92B (2031), 9.64% CAGR.
